**SAY HELLO TO THE FUSS-LESS EYE DROP  
FOR BLURRY CLOSE-UP VISION!**

#### What is YUVEZZI™?

YUVEZZI is a once daily eye drop for blurry close-up vision due to age, also called presbyopia.

It is the first and only eye drop that combines two active ingredients that work together to improve near vision.

- Carbachol helps your pupils get smaller (or “constrict”), making it easier to focus up close
- Brimonidine helps keep your pupils from getting too large (or “dilating”)

#### What is presbyopia?

As our eyes age, close-up vision may become blurry.

The lens in your eye stiffens slowly over time, making it harder to focus on close-up objects. Simple things like reading, texting, or checking a label may become harder without holding objects farther away or relying on reading glasses.

**IT'S NOT JUST YOU:**

About **9 in 10** adults over age 45 in the U.S. have presbyopia

## How can YUVEZZI™ help?

Get up to 8 hours of sharp, close-up vision with YUVEZZI eye drops.\*

**Use it your way:** YUVEZZI can be used on its own instead of reading glasses OR with contacts or glasses you use to see far away.\*\*

*\*\*If you wear contact lenses, remove them before using YUVEZZI. Wait at least 10 minutes after using YUVEZZI before you put them back in your eyes.*

## The science behind YUVEZZI

In medical studies, as soon as 30 minutes after taking YUVEZZI, some people could clearly read at least 3 more lines on an eye chart in low light without losing distance vision.

People using YUVEZZI had 6x greater improvement in reading speed compared to those who did not receive YUVEZZI.

YUVEZZI was studied in the world's largest and longest presbyopia safety study.

The most common side effects were headache (16%), impaired vision (6%), and eye pain (7%) or irritation (14%).

Most side effects were generally mild, didn't last long, and went away on their own.

To learn more about YUVEZZI visit: [YUVEZZI.com](https://www.yuvezzi.com)

*\*About half of people in medical studies could read close up at hour 8.*

### USE

YUVEZZI (carbachol and brimonidine tartrate ophthalmic solution) 2.75% / 0.1% is a prescription eye drop for adults with blurry close-up vision due to age.

### IMPORTANT SAFETY INFORMATION

Do not use YUVEZZI if you are allergic to any of its ingredients or if you currently have inflammation of the iris (iritis).

Before taking YUVEZZI, tell your doctor if you have depression, low blood pressure, or circulation problems.

YUVEZZI may cause temporary blurry, dim, or dark vision. If you experience this, avoid driving, using machinery, and participating in hazardous activities. Use caution when night driving and in other activities in low light.

Call your doctor right away if you suddenly have flashes of light, floaters, or vision loss.

Do not let the tip of the vial touch your eye, eyelid, or any other surface.

The most common side effects of YUVEZZI are headache, impaired vision, and eye pain and/or eye irritation upon use. These are not all of the possible side effects of YUVEZZI.

Most side effects were generally mild, didn't last long, and went away on their own.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit [www.fda.gov/medwatch](https://www.fda.gov/medwatch), or call 1-800-FDA-1088.

Please see the [Brief Summary](#) for more information.
